

# Week 4 Quiz

CALIFICACIÓN DEL ÚLTIMO ENVÍO

100%

1. Using Image Generator, how do you label images?

1 / 1 punto

- ☒ It's based on the directory the image is contained in
- ☐ It's based on the file name
- ☐ You have to manually do it
- ☐ TensorFlow figures it out from the contents

 **Correcto**

2. What method on the Image Generator is used to normalize the image?

1 / 1 punto

- ☐ normalize
- ☐ Rescale\_image
- ☐ normalize\_image
- ☒ rescale

 **Correcto**

3. How did we specify the training size for the images?

1 / 1 punto

- ☐ The training\_size parameter on the validation generator
- ☐ The training\_size parameter on the training generator
- ☐ The target\_size parameter on the validation generator
- ☒ The target\_size parameter on the training generator

**Correcto**

4. When we specify the input\_shape to be (300, 300, 3), what does that mean?

1 / 1 punto

- ☐ There will be 300 horses and 300 humans, loaded in batches of 3
- ☐ There will be 300 images, each size 300, loaded in batches of 3
- ☒ Every Image will be 300x300 pixels, with 3 bytes to define color
- ☐ Every Image will be 300x300 pixels, and there should be 3 Convolutional Layers

**Correcto**

5. If your training data is close to 1.000 accuracy, but your validation data isn't, what's the risk here?

1 / 1 punto

- ☒ You're overfitting on your training data
- ☐ You're overfitting on your validation data
- ☐ You're underfitting on your validation data
- ☐ No risk, that's a great result

**Correcto**

6. Convolutional Neural Networks are better for classifying images like horses and humans because:

1 / 1 punto

- ☐ In these images, the features may be in different parts of the frame
- ☐ There's a wide variety of horses
- ☐ There's a wide variety of humans
- ☒ All of the above

**Correcto**

7. After reducing the size of the images, the training results were different. Why?

1 / 1 punto

- ☒ We removed some convolutions to handle the smaller images
- ☐ There was more condensed information in the images
- ☐ The training was faster
- ☐ There was less information in the images

**Correcto**
