

# Exercise 4 - Handling complex images

This is the same exercise and notebook as provided [here](#). This button below will take you to the Google Colaboratory environment, in case you would like to use it to follow along with the course videos. In order to pass the graded item, you will still need to submit your work via the Coursera-hosted Jupyter Notebook.

-----

Let's now create your own image classifier for complex images. See if you can create a classifier for a set of happy or sad images that I've provided. Use a callback to cancel training once accuracy is greater than .999.

**Aprobado** 100 %
