## Exercise 4 - Multi-class classifier

This is the same exercise and notebook as provided <a href="here">here</a> . This button below will take you to the Google Colaboratory environment, in case you would like to use it to follow along with the course videos. In order to pass the graded item, you will still need to submit your work via the Coursera-hosted Jupyter Notebook.
Now that you've explored the concepts behind going from binary classification to multi class classification, it's time for another Exercise. In this one you'll use the Sign Language dataset from <a href="https://www.kaggle.com/datamunge/sign-language-mnist">https://www.kaggle.com/datamunge/sign-language-mnist</a> , and attempt to build a multi-class classifier to recognize sign language!
Let's build a multi-class classifier to recognize sign language!
